Backend Developer Intern- Assignment

CRUD Operations of Restaurants

    i.   Name of restaurant: ***
   ii.   Description of restaurant: ***
  iii.   Location of restaurant(Co-ordinates)(used for retrieval): ***
  iv.   Ratings[ ]: ***

Q. Get request based on Latitude and longitude with specified radius.

Input- {

        Latitude: 17.343242

        Longitude: 78.342343

        Radius: 500 (In Meters)

        }

Output: [{

        Name of restaurant: "   "

        Description of restaurant: "   "

        Location restaurant: {latitude, longitude}

       Average Rating of the restaurant: 5

       No. of Ratings: 3

     }]

All Restaurants near by within the specified radius should be displayed in the output.

Output can be many [Array of objects].

No frontend only use <u>API</u>, send Postman collection and use <u>MongoDB Atlas</u>.
